\*1 Monitoring tests conducted on items for shipment and sale (except for the tests conducted on the items aimed at lifting shipping restrictions.\*5)

\*2 The standard value in foods under the Japanese Food Sanitation Act (combined total of radioactive cesium (Cs-134 and Cs-137)) (General food) 100Bq/kg, (Milk) 50Bq/kg

\*3 It was determined that there is a possibility for the brown rice to exceed the standard level in the tests for radioactive materials in all volume and all bags of rice, and so the number of detailed test cases using germanium semiconductor detectors was counted.

There are about 10,000,000 items tested every year for the inspections for radioactive materials in all volume and all bags of rice. The results are published in the following website.

Fukushima Association for Securing Safety of Agricultural Products (<https://fukumegu.org/ok/contentsV2/>)

\*4 Chum salmon (muscle), chum salmon (milt), chum salmon (ovary), snow crab (male) and snow crab (female) are counted separately as each item.

Also, chum salmon (muscle) from sea water and from rivers/lakes were separately counted as each item, but in the total number of items they are counted as one item.

●The tests conducted on items aimed at lifting shipping restrictions\*5 (Published in FY2016)
